procurement officer listed at the top of this page.

Contract #: 4400009931
FEIN: 52-2198860

Contract synopsis: SAS Master Data Management gives agencies the ability to reconcile their data systems to help them create a singular, robust view of a citizen, license, or any custom entity that an agency wants to define. The ability to reconcile any number of source data systems in any format and apply data quality procedures throughout the reconciliation process makes this solution a robust foundation for reporting and analytics. Whether this foundation is used as part of the analytical toolset in the SAS Platform or called from a web service, the results can be trusted, so systems become smarter, compliance becomes easier, and answers come faster. SAS Master Data Management and SAS' Analytics Platform will help any agency leverage their data to make better decisions. For more in depth information please see the contract documents.
